Acknowledgement

The articles in this STOTEN Special Issue present the results of the 2009 AMAP Assessment of Persistent Organic Pollutants in the Arctic. The 2009 assessment is the third assessment conducted by the Arctic Monitoring and Assessment Programme (AMAP) on this subject, and updates previous assessments made in 1998 and 2002. The 2009 POPs assessment results are also summarized for decision-makers in the AMAP Report *Arctic Pollution 2009*, together with results of other AMAP 2009 assessment activities (for further information, see www.amap.no).

AMAP would like to thank all of the scientific experts and data providers who contributed to the 2009 AMAP POPs assessment work; in particular, Derek Muir and Cynthia de Wit who lead the AMAP POPs expert group. The support of the Arctic countries is vital to the success of AMAP. AMAP assessments are largely based on national monitoring and research programmes. AMAP would like to specially acknowledge the lead countries for the AMAP POPs

assessment activities, Canada and Sweden. Furthermore, AMAP would like to express its appreciation to Canada and to the Nordic Council of Ministers for their additional financial support to the AMAP POPs assessment work.
